

SPECIALISTS IN TECHNOLOGICAL SOLUTIONS FOR HOTELS

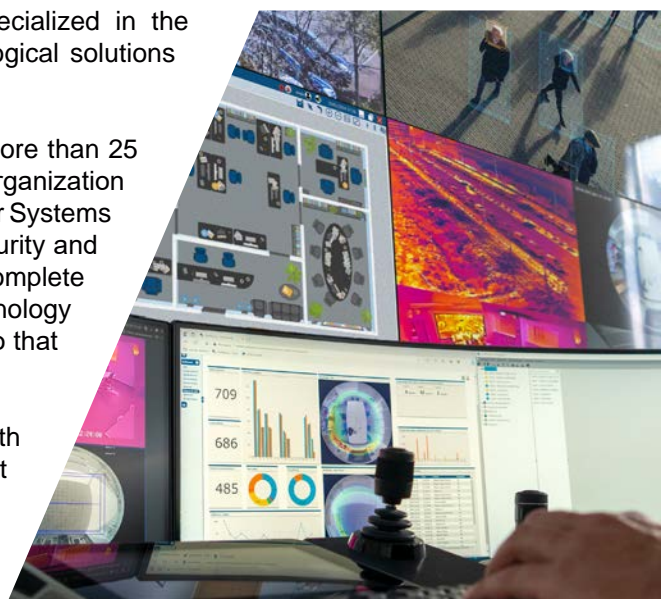

SIMPLIFY OPERATIONS AT YOUR FACILITIES

SCATI is a manufacturer of intelligent security systems specialized in the development of technological solutions in developing technological solutions and adapting them to the needs of the hotel sector.

As a result of our own innovation and development work for more than 25 years, SCATI offers you a complete solution that provides your organization with much more than just security management. Whether with our Systems Integration Platform, where you can manage your different security and automation subsystems from a single solution, or with our complete Suites for Video Surveillance and Access Control, our technology incorporates Artificial Intelligence and Big Data management so that users can get the most out of their systems.

Simplify your daily operations, provide your operators with intelligent tools that enable them to be more productive and get the most out of your systems with SCATI, so you can go beyond security.

INTEGRAL MANAGEMENT FROM THE CONTROL CENTER

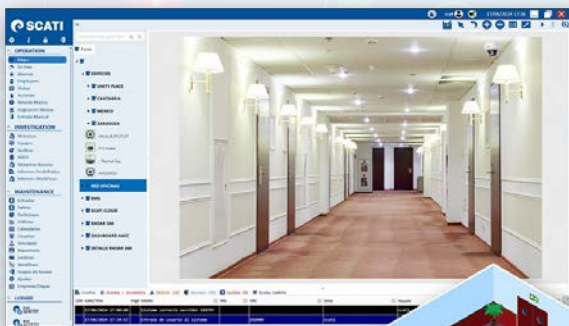

SUITE SENTRY

Systems integration platform

The hotel industry faces challenges ranging from guest and employee security, daily access control of different suppliers and employees, security of belongings, false claims, perimeter and facility control, to the management of a large amount of personal and business information.

Coordinating security measures at different sites requires a centralized approach. SCATI SENTRY is the software platform that unifies the different security subsystems but also integrates other fire, industrial, HVAC, lighting and energy control systems so that our customers can manage in a simple, efficient and unified way all the information coming from different subsystems, whether security or building control.

With SCATI SENTRY, you can optimize operating costs without compromising service quality by programming adjustments to lighting, climate control and other systems.

Incident response generation (security, air conditioning, etc.) to ensure optimal operation of systems and minimize maintenance work.

Centralized access management to allow access only to authorized personnel in sensitive areas, monitoring the capacity in real time and offering a personalized service to VIP clients.

Fire and leak prevention through sensor management for fast and efficient response, minimizing damage and ensuring the well-being of guests and employees.

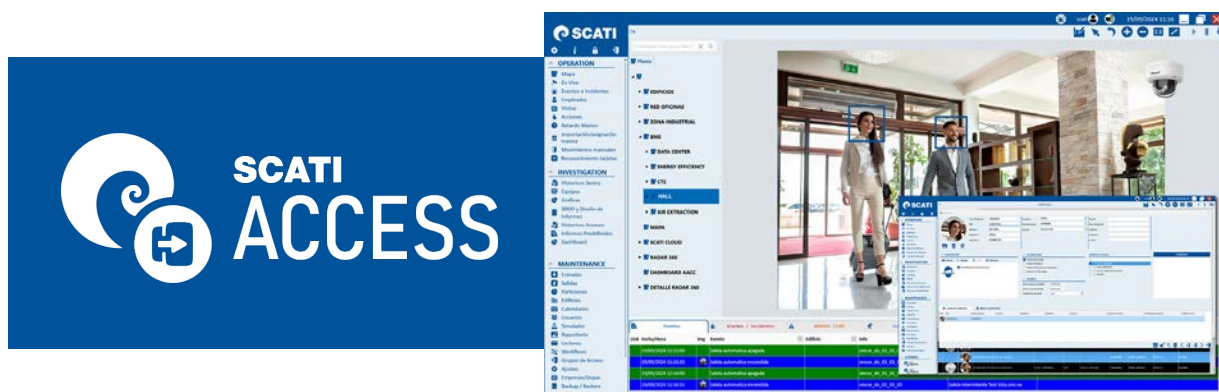

SUITE ACCESS

Access control and visitor management

The presence of numerous employees and their high turnover, suppliers, temporary staff and vehicles entering and exiting the facility pose significant challenges, requiring efficient access control.

SUITE ACCESS is a robust, reliable and scalable solution that protects access to restricted areas and prevents the entry of intruders, eliminates the possibility of identity theft and ensures centralized management of all control elements (card readers, biometric terminals or license plate reading cameras), so that only authorized persons and vehicles can access permitted areas.

SUITE ACCESS has a visitor management module that will allow you to guarantee temporary access to suppliers and customers in a simple way, and allows you to manage access by zones of authorized persons at all times.

SUITE VISION

Proactive intelligent video surveillance

SUITE VISION is a complete video surveillance platform that monitors facilities in real time and guarantees guests' privacy.

SUITE VISION optimizes daily management, as it facilitates the registration and control of people and vehicles accessing your facilities; employees, suppliers and guests. Precise people counting, among other functionalities, is essential to maintain effective control in the complex and to know the capacity instantly.

This technological approach not only strengthens physical and property security, but also improves operational efficiency by providing accurate, real-time data on activity in the facilities.

BUSINESS INTELLIGENCE SCATI RECKON

Security as a business driver

Facial recognition

Identify unauthorized persons, obtain demographic data of your visitors, and recognize VIP customers to provide them with better service. Control employee access and prevent identity theft in compliance with data protection regulations.

People counting

Know the capacity and saturation of customers in your facilities, control the time of stay within a selected perimeter, and find out which days and hours your facilities and rooms have a greater affluence.

Queue management at check-in and free buffet

Know the number of people in a queue and their waiting time to optimize resources and provide the best user experience.

Parking control - LPR (License plate reading)

Control vehicle access to your facilities, restrict access to unauthorized vehicles and search by name, license plate and date.

Other analytics

- Heat maps
- Object classification
- Abandoned objects
- Intrusion
- Falls

Protection of hotel inventory and assets

Monitor and track important assets, receive alarms in case of anomalies and know where they are at all times.

Verification of operations in restoration areas

Integrate the POS of the restoration areas with the video system, in order to perform image-supported queries on the orders placed by customers and the amount invoiced to them, ensuring proper customer service and avoiding possible incidents.

Turn your data into decisions

Artificial intelligence (AI) is transforming the way hotels protect their facilities, improving both physical security and cybersecurity. AI enables process automation, predictive analytics and faster, more accurate decision-making.

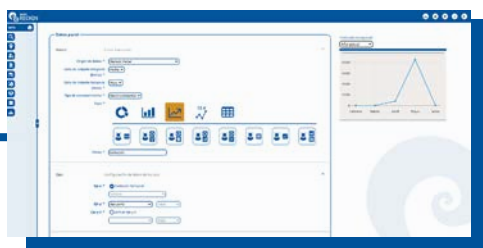

The application of these technologies in products such as video surveillance, access control, as well as their integration with the hotel's own management systems, provides multiple benefits by optimizing both daily operational efficiency and safety and security.

SCATI RECKON is SCATI's BI platform that centralizes and analyzes data to provide valuable information through graphs and balanced scorecards. Under a single platform, the hotel can know the preferences of its customers to offer a personalized experience, know the hours or days of greater affluence, as well as know which are the busiest areas to implement greater security or commercial actions in those places. SCATI RECKON maximizes business profitability by improving processes through BI.

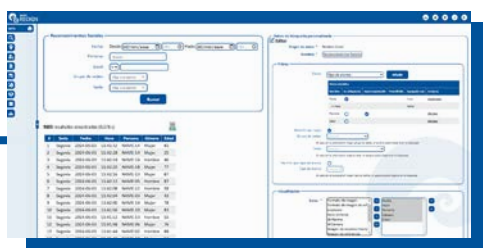

Creation of dashboards

SCATI RECKON allows the creation of dashboards by aggregating information from video surveillance systems and video analytics, as well as enabling the integration of data from third-party systems or ERPs with images from our SCATI VISION recording servers.

Smart search

It allows video searches associated with different criteria based on: date, exact time, location, type of access that has been made, frequency of access (if it is more or less than usual), etc. This can be useful for identifying fraud, theft or other incidents. Any user can perform these searches, under a web environment and without the need to install desktop applications on their computers.

Reports

It is possible to generate detailed reports that facilitate decision making. From the analysis of guest statistics, to the complete reconstruction of the most frequent customer journey through the facilities, thanks to heat maps, but also the definition of evacuation plans in case of emergencies. SCATI RECKON transforms complex data into useful reports, allowing hotels and resorts to optimize operations, improve efficiency and maximize the profitability of their facilities.

You imagine, we create.

SCATI is a manufacturer of intelligent security solutions specialized in creating solutions tailored to your needs.

Based on trust and proximity, we provide you with the latest technology to solve your real problems, present and future, with the highest levels of cybersecurity.
