SCATI

SPECIALISTS IN LOGISTICS SECURITY

OPTIMIZE YOUR PROCESSES WITH VIDEO SYSTEMS

SCATI

SCATI is a manufacturer of intelligent security systems specialized in developing technological solutions and adapting them to the needs of the logistics sector.

As a result of our own innovation and development work for more than 25 years, SCATI offers you a complete solution that provides your organization with much more than just security management.

Whether with our Systems Integration Platform, where from a single solution you can manage your different security and automation subsystems, or with our complete Suites for Video Surveillance and Access Control, our technology incorporates the latest in Artificial Intelligence and Big Data management so that users get the most out of their systems.

Simplify your daily operations, equip your operators with intelligent tools that allow them to be more productive and get the most out of your systems with SCATI, so you can go beyond security.

INTEGRAL PROTECTION OF THE ACTIVITIES
COMPANY LOGISTICS

SCATI's solutions for the logistics sector are the result of innovating, evolving and adapting to the particular requirements of companies' logistics activities. They are open and integrable platforms, equipped with the latest in Artificial Intelligence following the strictest standards of the IT and cybersecurity world.

We are talking about complete solutions for intelligent video surveillance and access control, business intelligence (BI) tools and a single platform for integrating the different security and automation subsystems. These solutions are composed of all the hardware and software elements that may be needed, complemented by Big Data and AI tools that take SCATI's value proposition for companies' logistics activities to a higher level.

Supervised operations

Beyond security, companies and their logistics activities require constant monitoring to ensure the safety of their facilities, optimize inventory management, prevent losses and theft, and ensure operational efficiency. An intelligent video surveillance system and comprehensive control of the facility allows to monitor environments and control access in real time, improve decision making and maintain business continuity.

- ☑ **Perimeter protection and parking security**
- ☑ **Access control and gauging**
- ☑ **Prevention of work-related incidents**
- ☑ **Process monitoring**
- ☑ **Tracking and traceability of assets/goods**

SCATI ANALYTICS

Put eyes on your processes

Securely bet on the ideal solution to have full control over your daily operations and provide quick responses to incidents. AI-based video analytics in logistics environments can ensure the safety of workers and the integrity of goods.

Barcode/QR code reading	Abandoned object	Object **classification**	Crossing line	Wandering	Crowds	Color of objects	Movement detection
Stolen object	Intrusion	Falls	Optical character recognition	Directional alarm	People running	Tampering	People counting

INTEGRAL MANAGEMENT FROM THE
CONTROL CENTER

SUITE SENTRY

System integration platform

The logistics industry faces challenges ranging from the security of large quantities of goods, the monitoring of shipments, the occupational safety of workers to the management of a large amount of information.

Coordinating security measures at different sites requires a centralized approach.

SCATI SENTRY is the software platform that integrates and unifies the different security subsystems, such as CCTV, Intrusion Detection and Security such as CCTV, Intrusion, Perimeter Detection, Fire and industrial systems, but also allows the integration of other HVAC or lighting systems.

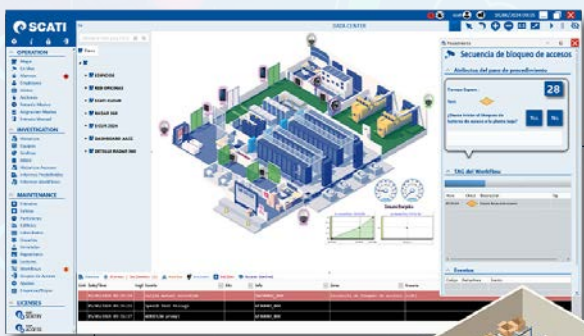

It allows the integration of industrial automation, air conditioning or energy control systems.

Control and optimization of energy resources: programmed adjustment of lighting, air conditioning (temperature and humidity) and other systems.

It configures automatic responses to specific events, provides effective incident management tools and generates detailed reports to assess system efficiency, comply with regulatory requirements and optimize internal procedures.

Centralized management of access to various areas of the facility, ensuring that only authorized personnel can enter sensitive areas.

Fire and leak prevention through sensor management for fast and efficient response, minimizing damage and ensuring operational continuity.
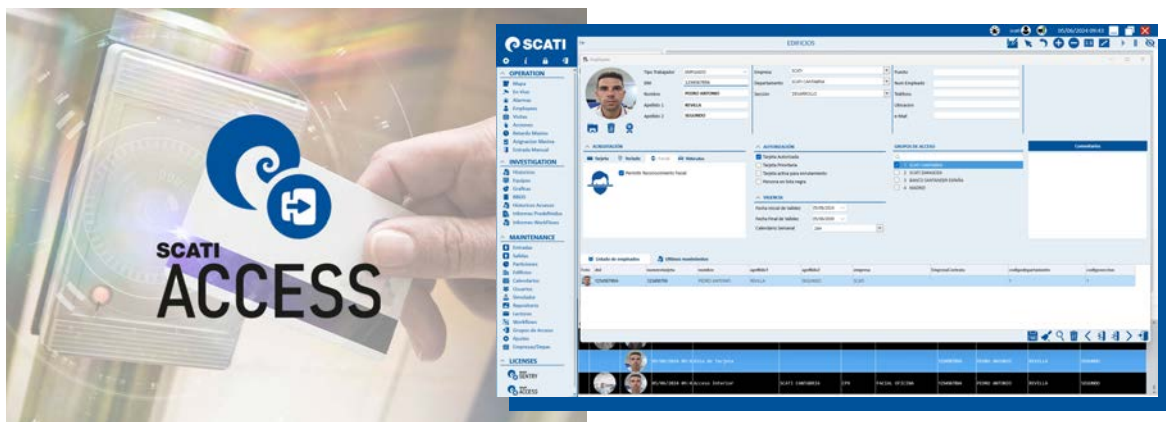

SUITE ACCESS

Access control and visitor management

The presence of numerous employees, contractors, temporary staff and vehicles entering and leaving on different shifts poses significant challenges.

SUITE ACCESS offers its users a robust, reliable and scalable solution to protect their facilities and goods with maximum guarantees by reducing the possibilities of identity theft thanks to the centralized management of all control elements (card readers, biometric terminals or LPR cameras), ensuring that only authorized persons and vehicles can access those areas allowed.

SUITE ACCESS has a visitor management module that will allow you to guarantee temporary access to suppliers, customers and carriers in an easy and secure way.

SUITE VISION

Proactive intelligent surveillance

SUITE VISION is a complete video surveillance platform, from cameras and recording servers to VMS software for remote management of images, which enables real-time monitoring, improving the security of people and facilities, ensuring the integrity of the goods.

SUITE VISION optimizes operational management by facilitating the registration and control of vehicles accessing its facilities, the quick reading of QR codes and the accurate counting of people, among other functionalities, which is essential to maintain effective control of merchandise and personnel. This technological approach not only strengthens physical and property security, but also improves operational efficiency by providing accurate, real-time data on activity in the logistics center.

BUSINESS INTELLIGENCE
# SCATI RECKON

Convierta sus datos en decisiones

The integrated use of artificial intelligence (AI) with Business Intelligence (BI) in the logistics sector has revolutionized the way companies manage their operations and ensure security. The application of these technologies in products such as video surveillance, access control, as well as their integration with the company's own systems for managing its business provides multiple benefits by optimizing both operational efficiency and the protection of the company's assets.

SCATI RECKON is SCATI's BI platform that centralizes and analyzes data to provide valuable information through graphs and balanced scorecards. Under a single platform, the company can centralize decision making, have a precise location of its assets, be able to implement the traceability of goods in its facilities or, ultimately, to improve operational efficiency.

Creation of dashboards

SCATI RECKON allows the creation of dashboards by aggregating information from video surveillance systems and video analytics. It allows the integration of data from third-party systems, such as SGAs or indoor positioning systems, with images from our SCATI VISION recording servers.

Smart searches

It performs video searches associated with different fields: dispatch or tracking number, origin, destination, dimensions, etc.
Any user can perform these searches, under a web environment and without the need to install desktop applications on their computers.

Reports

It generates detailed reports that facilitate decision making in the logistics area. From the analysis of vehicle statistics to the complete reconstruction of a package's journey through the distribution center, SCATI RECKON transforms complex data into useful reports, enabling companies to optimize operations, improve efficiency and maximize the profitability of their facilities.

Traceability of goods

In an increasingly competitive market and with more demanding customers, punctuality in the delivery of goods is crucial. SCATI PARCEL integrates video surveillance with Warehouse Management Systems (WMS) and parcels, ensuring total control over every single merchandise.

SCATI PARCEL associates the images captured by the video systems with the corresponding metadata of each merchandise (dispatch number, origin, destination and dimensions, etc.); presenting them in a unified way to ensure complete traceability in any logistic operator's facility.

Thanks to this integration, users can perform precise searches by specific data, visualize the routes of each merchandise and quickly locate any incident by visually checking the recorded video. SCATI PARCEL also allows the incorporation of customized floor plans, facilitating access to the facility's cameras directly from the floor plan itself, which speeds up troubleshooting.

Seguimiento de activos móviles

Through an advanced system of antennas and tags, SCATI TRACKER provides real-time positioning of all assets, converting this information into coordinates displayed on a detailed plan of the facility.

The ability to search and visualize assets in real time on the facility's floor plan allows for precise location and a detailed history of their movements. This reduces the time lost in manual searches and allows a more efficient allocation of resources, helping in the optimization of routes and processes to improve overall productivity.

Its multi-platform management allows centralized administration of multiple locations, optimizing search and control in different warehouses or customizable groups, providing valuable information for strategic decision making.

You imagine, we create.

SCATI is a manufacturer of intelligent security solutions that develops software that goes beyond the physical protection of distribution centers and/or logistics platforms.

For more than 25 years we have been developing "turnkey projects" for the logistics sector that solve the problems of merchandise traceability, asset control, process monitoring, stowage control, vehicle fleet management.

Thanks to our intelligent video surveillance systems, our customers "put eyes" on their processes to know what really happens, how to improve these processes, ensure the traceability of each merchandise and simplify daily operations.

Development of turnkey projects, because the solution for each company is different

Continuous and automated monitoring throughout the entire supply chain process

Optimization of procedures in other business areas through AI
